## 题目内容

Use the example described by the professor to explain what role distancing is.

## 你的回答

there are two theories about the distinction of dinosaur the first is lack of food it explains that a planet crash earth and block sun and without sunlight plant without sunlight so they have a live and the animal who a plant die and the animal a other animal also die so this the first reason the next reason that the global warmer which have more carbon dioxide make the heat can out the heat was trapped ped and the gender growing slow and the warmer temperature the female are fewer, so dinaousor distincted

## AI 参考答案

The reading discusses theories for dinosaur extinction. The professor elaborates on two specific theories. First, the food shortage theory: an asteroid impact created a dust cloud that blocked sunlight, causing plants to die. This led to the extinction of plant-eating dinosaurs and then meat-eating ones. Second, the global warming theory: volcanic eruptions released carbon monoxide, trapping heat. This raised temperatures, affecting dinosaur egg incubation. Since gender in reptiles depends on egg temperature, warmer eggs produced more males than females. With fewer females, reproduction declined, ultimately causing extinction. Thus, the lecture provides detailed mechanisms for the theories outlined in the reading.

## 问题与建议

□ 问题: ["The student misinterprets the second theory by stating 'carbon dioxide' instead of 'carbon monoxide' and incorrectly describes the mechanism as 'heat can out' when the lecture explains heat was trapped. The student also fails to explain the biological mechanism connecting temperature to gender determination in dinosaur eggs.", 'The student omits key details from both theories: for the first theory, the asteroid impact and dust cloud blocking sunlight; for the second theory, the volcanic eruptions and the specific consequence of fewer females leading to population decline. The response lacks integration of how the lecture examples illustrate the theories from the reading.', "The response has serious grammatical errors and unclear phrasing (e.g., 'planet crash earth,' 'animal a other animal,' 'gender growing slow,' 'dinaousor distincted') that significantly hinder comprehension and coherence."]

□ 建议: Content: The student mentions both theories but provides incomplete and inaccurate details. The first theory lacks the asteroid impact and dust cloud mechanism. The second theory misstates carbon monoxide as carbon dioxide and fails to explain the gender-temperature relationship. Integration: The response does not explicitly connect the lecture examples to the reading's theoretical framework. Coherence: The explanation is disjointed with unclear cause-effect relationships. Language use: Numerous grammatical errors and awkward phrasing obscure meaning.

According to the reading passage, ; The professor elaborates on this by explaining that; This illustrates how; Specifically, the lecture describes; These examples demonstrate the concept of

## 推荐句型

According to the reading passage, scientists have proposed various theories to explain dinosaur extinction. ; The professor elaborates on this by explaining that an asteroid impact created a dust cloud blocking sunlight. ; This illustrates how the lack of sunlight disrupted the food chain, leading to mass extinction. ; Specifically, the lecture describes how volcanic eruptions released gases that trapped heat in the atmosphere. ; These examples demonstrate the concept of how environmental changes can drive species extinction through different biological mechanisms.
